

# Comprehensive solutions for healthcare providers

Product catalogue

# tradition since

### ZARYS is a family-owned company with Polish capital, operating on the market since 1989

Evolution from a small enterprise to a leader in the sourcing industry is a process that led to the creation of more comprehensive offers and solutions that facilitate the work of medics and save the lives of patients. ZARYS is currently hiring over 250 people, who are working to serve thousands of clients operating in the field of health care worldwide.

### comprehensive medical supplies for hospitals

The company's customers have many product groups at their disposal, starting from medical gloves, through dressing materials, to operating kits and treatment packages. Products from different categories have individual characteristics and specific purposes. In order to facilitate the identification of materials and improve the ordering process, 13 different categories were created in addition to the latest category "ZARYS kids".

### being a manufacturer of disposable medical equipment, ZARYS meets the highest required standards

Part of ZARYS production plants are located in Silesia and combine sterile production - a cleanroom with an area of over 600 m2 - a place for manufacturing dedicated operating sets, a sewing room and an automated production line.

Zarys logistic center

The ZARYS logistic center is the largest warehouse of disposable medical equipment in Central Europe. Located in Zabrze area as part of Katowice Special Economic Zone. Modern, high-bay warehouse, occupies an area of over 22,850 m2 that contains over 22,500 pallet spaces.

### **EXAMINATION GLOVES**

The device is intended for patient diagnostics, providing a barrier to the transmission of microorganisms between the operator and the patient, minimizing the risk of cross-contamination.

**NITRILE GLOVES** are made of synthetic acrylonitrile butadiene rubber (NBR), they are an alternative to latex gloves. They do not contain latex proteins, and the content of chemical accelerators is minimized, so they are friendly to the skin.

They are characterized by:

- high mechanical strength (also for puncture),
- chemical and biological resistance (constitute a barrier for viruses and bacteria),
- flexibility, thanks to which they adjust to the hand, providing the work comfort to the user.

VINYL GLOVES made of PVC (polyvinyl chloride) are intended for low-risk procedures due to limited mechanical, chemical and biological resistance. The glove material does not cause Type I allergic reactions, ZARYS vinyl gloves are free of harmful phthalates.

LATEX GLOVES made of natural rubber are recognized as the best barrier against blood borne pathogens and part of hazardous chemical substances. They are also characterized by high flexibility, providing the work comfort to the user by fitting to the hand like a "second skin". Latex gloves, due to the natural raw material, are biodegradable.

### STERILE, SURGICAL AND PROTECTIVE GLOVES

Made from natural rubber latex, intended to be worn on hands in surgical settings to provide barrier against potentially infectious fluids or other contaminants, and to protect the patient by ensuring sterility of the wound area. These gloves are intended for single use only, and are classified as Medical Devices Class IIa as well as a Personal Protective Equipment Category III. The indicated Gloves are designed to protect against substances and mixtures which are hazardous and against harmful biological agents.

# SURGICAL GLOVES

www.zarys.com 23

ZARYS International Group prides itself on having a long lasting experience gained in the medical industry by being a leading manufacturer and supplier of single use medical devices.

A wide range of products and complex solutions makes it possible to successfully respond to our customers' needs and meet their expectations.

High standards of design, production, storing and transportation allow to maintain quality, safety and comfort of use to both the medical personnel and patients. A wide range of single use products include basic medical devices and those dedicated to specialized procedures.

ZARYS branded products find a wide application in anesthesiology, urology, gynecology, oxygen and fluid therapy and in many other medical specialities. They make it possible to perform medical procedures including patient diagnostics, prophylaxis, treatment and care.

### dispoFINE

### injection needle

- needle tube is made of smooth and durable stainless steel
- sheath and hub made of polypropylene
- thin walls assure adequate stream pace • tip sharpened in three surfaces (back cut)
- bevel type: LB/BL standard long bevel
- surface of needle tube covered with sliding agent (silicone)
- glued needle elements to prevent their separation (glue epoxy resin)
- hubs coloured in accordance with ISO code allowing fast recognition of needle size
- sinale-use
- non-toxic, non-pyrogenic
- packaging: 1 pc./paper-foil

### indication

· device designed for intravenous, intramuscular and hypodermic injections

### dispoSULIN

### insulin pen needle

### features

- made of polypropylene, polyethylene and stainless steel
  triple-point needle blade allows easy and atraumatic skin penetration
  covering the needle with silicone lubricant reduces resistance during
- injection • thin walls of needle ensure easy flow of medicine and the right flow rate
- coloured cap and paper cover of packaging make it easy to quickly recognize size of needle
- available in various sizes, allowing you to adapt to individual needs • universal, compatible with all pen models
- single-use
- non-pyrogenic, non-toxic packaging: 100 pcs/box

### indication

- for subcutaneous injection
- dedicated for use with pre-filled pens (insulin pens)

REF	size c	olour	G	intermediate packaging

\$ bulk packaging: 50 x 100 pcs

### features

- easy to use, ergonomic shape
  body with knurled surface for a secure grip
  sharp receiving spike enabling tight and safe connection with containers of different capacity

dicoSPIKE, dicoSPIKE Chemo

- or online enclosed
  receiving spike groove guarantees complete emptying of the container
  hermetic self-Locking cap securing the connector against contamination
  available in version with air filter and in version with air and particle filter
  air filter protects against microbiological contamination and against harmful aerosols
- particle filter is an effective barrier to protect drugs and liquids from , contamination
- female Luer-Lock connector compatible with products with either male or female Luer-Lock
- non-pyrogenic
- single-usepackaging: 1 pc./ paper-foil

### indication

- · device for needle-free dissolving and / or withdrawing drugs from multi-

### side hole needle

### features

- made of stainless steel
- the needle hub ideally suited for Luer and Luer-Lock (to ensure full tightnessof the connection with syringes)
- CE sign comply with PN-EN-ISO 7864
- individual packaging comply with PN-EN 556 and PN-EN 868, type blister-pack coloured cap and paper cover of packaging make it easy to quickly recognize single-use

### indication

- made of high quality materials, using the latest technology, which guarantees its high quality and failure-free, intended usage
  special design needle with a pencil cut with a side hole, designed to
- withdraw medication from a vial, including vials with a rubber stopper
   needle construction prevents from accidental, unintended production
- of rubber scrubs, in order to avoid contamination of the drug
- side hole with special cut, placed on the top of the needle enables free dissolution of the drug and limits foaming by directing the fluid directly onto the walls of the vial

### construction of the syringe

**GET TO KNOW OUR SYRINGES** 

catheter tip 90°

catheter tip 45°

syringes

the drug/liquid residues

type of connection used for rinsing (cleaning)

insulin and tuberculin

special design of the plunger seal reduces

catheters, stomach tubes and feeding purposes

nozzle cut at 45 degrees increases the lumen surface

### nozzle types:

### Luer slip, centric

tip of the syringe is pushed into the hub of the needle or other device (e.g. catheters) and twisted. It allows to remove the connection immediately if necessary

### Luer slip, eccentric

eccentric location of the tip is used in procedures involving the administration of drugs and fluids where closer proximity to skin is necessary

### Luer-Lock

designed to secure connection between the syringe and the device (needle, tube, catheter, stopcock, etc.). The tip is equipped with thread to screw in the syringe to prevent disconnection

### easyFLOW IS

infusion set (dual chamber)

### features

- made of high quality materials, using the latest technology, which guarantees
   very high quality and trouble-free, intended use
- Very firght quality and trouble-free, Intended USE
  2-way, 2-plane sharp closure-piercing device of the drip chamber with anti-slip surface that guarantees tight and reliable connection with fluid containers
  air-inlet with anti-bacterial filter and coloured (green) flap
  dropler chamber divided into a flexible lower part and a hard upper part with an additional pressure ring for easy insertion into fluid containers
  page of the manufacturer placed on the dropler chamber
- name of the manufacturer placed on the dropler chamber
- device in its entirety including the spike and tip transparent, allowing visual inspection of the flow along its entire length
- dropper: 20 drops = 1 ml ± 0.1 ml
  fluid filter protecting against larger particles with pore size 15 µm
  soft, flexible tubing with Luer-Lock conical fitting
- precise safe roll clamp with integrated spike holder and with a holder for securing the drain
- both tips of the device additionally secured with protective caps
- single-use
- non-pyrogenic, non-toxic
- individual packaging: paper-foil with a coloured code (blue) identifying the device type

### indication

• device intended for connection to an intravenous line for the administration of fluids, photosensitive medicinal products solutions and other body fluids during infusion therapy

### easyFLOW IS ECO

### infusion set

### features

- made of high quality materials
- · 2-way sharp closure-piercing device of the drip chamber that guarantees tight and reliable connection with fluid containers
- air inlet with anti-bacterial filter and colored (blue) flap
- pliable drip chamber, size 4cm • dropper: 20 drops = 1 ml +/- 0.1 ml
- fluid filter protecting against larger particles with pore size 15 µm
- soft, flexible tubing
- universal Luer-Lock conical fitting
- precise safe flow regulator
- · both tips of the device additionally secured with protective caps • packaging: 1pc./foil bag
- single-use
- non-pyrogenic, non-toxic

### easyFLOW IS SAFE

infusion set

### features

- 2-way, sharp spike of the drip chamber with anti-slip surface that guarantees tight and reliable connection with fluid containers
- air-vent with anti-bacterial filter and blue flap
- flexible droplet chamber, size 6 cm, equipped with additional pressure wings to facilitate insertion into containers with liquids
- dropper: 20 drops = 1 ml ± 0.1 ml
- hydrophilic filter Liquid Lock with a mesh size of 8 µm, which automatically stops the flow when the chamber is emptied. Prevents air from entering the tubing to prevent air embolism
- soft, flexible drain with additional port for drug application • precise safe roll clamp with integrated spike holder and with a holder for securing the drain
- universal Luer-Lock tip
- · Air Pass plug with hydrophobic filter, which allows filling of the tubing without accidental contamination and protects against fluid leakage
- single-use
- non-pyrogenic, non-toxic
- individual packaging: paper-foil with a colored code (blue) identifying the device type

### indication

• device for fluid transfer in infusion therapy

### easyFLOW IS AMBER

infusion set, amber

### features

- amber colouring of the tubing and drip chamber
- · double-channel, sharp spike of the drip chamber with a matted surface with non-slip Surface guaranteeing tight and reliable connection with fluid containers/bags
- air inlet with anti-bacterial filter and coloured (blue) flap
- flexible drip chamber with length 6 cm, equipped with additional pressure wings to facilitating puncture into containers with liquids
- dropper: 20 drops = 1 ml +/- 0,1 ml
- fluid filter protecting against larger particles with pore size 15 µm
- soft and flexible drains with additional port for drug application
- precise safe roll clamp with integrated spike holder and with a holder for securing the drain with name of the manufacturer placed on the roll clamp
- single-use
- non-pyrogenic, non-toxic
- universal Luer-Lock tip
- packaging: 1 pc./paper-foil

### indication

· device for fluid transfer photosensitive medicinal and other body fluids in infusion therapy

### easyFLOW IS REG

infusion set with precision flow rate regulator

### features

- 2-way, sharp closure-piercing device of the drip chamber with anti-slip surface that guarantees tight and reliable connection with fluid containers
   adjustable from 5 to 250 ml/h (dark blue digits on white background) for viscosities below 10% and adjustable from 5 to 200 ml/h (white digits on dark blue background)
- for viscosities 10%-40% ability to completely close (OFF) and open (ON) the flow rate
   air-inlet with anti-bacterial filter and coloured (blue) flap
- dropler chamber and drain made of phthalate-free PVC
- dropper:  $20 \text{ drops} = 1 \text{ ml} \pm 0.1 \text{ ml}$
- fluid filter protecting against larger particles with pore size 15 µm
- soft, flexible drain with additional port for drug application
  universal Luer-Lock tip secured by an Air Pass plug with a hydrophobic filter, which allows the drain to be filled without accidental contamination and prevents fluid leakage
- precise safe roll clamp with integrated spike holder and with a holder for securing the drain
- name of the manufacturer placed on the roll camp
- both tips of the device additionally secured with protective caps
- single-use
- non-pyrogenic, non-toxic
- individual packaging: paper-foil with a coloured code (blue) identifying the device type

### indication

· device intended for connection to an intravenous line for the administration of fluids, photosensitive medicinal products solutions and other body fluids during infusion therapy with adjustable flow control

### precision flow regulator

### features

- · precision regulator to set the exact desired flow rate within a range of 5-250 ml/h with the possibility to completely close or open the flow rate
- two adjustment scales, differentiated by colour • adjustment from 5 to 250 ml/h (dark blue digits on white background) for viscosities below 10% and adjustment from 5 to 200 ml/h (white digits on dark

NEW

- blue background) for viscosities of 10%-40%.
- additional Y port for drug administration
- luer lock termination • both ends of the tube protected by protective caps
- single-use
- non-pyrogenic, non-toxic
- unit packaging: 1 piece paper/foil

### indication

- dual scale regulator for precise administration of drugs and fluids as well as parenteral nutrition
- · compatible with any infusion set model

conallhealth 岱 Your Partner In Healthcar

### easyFLOW TS PREMIUM

transfusion set

### features

P1500-BF	transparent	150 cm	50 pcs
PB1500-BF	amber	150 cm	50 pcs

### needle free valve

with extension line

### features

- housing made of transparent material polycarbonate
- high-quality silicone membrane allows multiple port injections
- flat injection surface smooth and evenly ended port membrane that facilitates disinfection extension line made of transparent polyurethane
- metal-free, suitable for MRI examination
- extension lines fitted with sliding clamps
- male connector protected with applicator
- total length 15 cm
- can be used for 7 days or 350 activations
  filling volume of needle-free port 0.09 ml
- dead space 0.001 ml
- resistance to injection fluid pressure 3 bar (44 PSI)
- resistance to back pressure 2 bar (29 PSI)
- single-use packaging: 1 pc. / paper-foil

indication

### needle-free valve

### features

- body made of transparent material polycarbonate
- high-quality silicone membrane allows multiple port injections • flat injection surface - smooth and evenly ended port membrane
- that facilitates disinfection
- metal-free, suitable for MRI examination
- male connector of the transparent port is secured with a cap allowing for aseptic removal of the item from the packaging\* • may be used for 7 days or up to 350 activations
- priming capacity: 0,09 ml • high flow rate: 350 ml/min
- withstands injection fluid pressure of 3 bars (44 PSI)
- withstands back pressure of 2 bars (29 PSI)
- single-use
- packaging: 1 pc./paper-foil

### indication

- intended for closing infusion ports
- device intended for multiple, needle-free injections
- (liquid drug administration, blood sample taking)
- protects infusion lines from contamination and infection
- during infusion therapy
- does not require using safety caps • dedicated for standard Luer and Luer Lock connectors

MTVR-XL	210 cm +/- 5%	XL	100 x 1 pc.	SIL

### nebulizer mask

### with tubing

### features

- made of transparent, non-toxic PVC

- single-use
  packaging: 1 pc./paper-foil

### indication

 for producing aerosol containing a comminuted medicine, that can be delivered directly to the respiratory system as the patient breathes

REF	length of tubing	size
MTN-S	210 cm +/- 5%	S
MTN-M	210 cm +/- 5%	Μ
MTN-L	210 cm +/- 5%	L
MTN-XL	210 cm +/- 5%	XL

- - adjustable nose metal plate and rubber fastening
    equipped with a 210 cm (+/- 5%) long tubing with universal connectors
    tubing with star cross-section that is resistant to bending
  - 8 ml nebulizer (graduated every 1 ml)
    average size of the molecule at a flow of 6l/min 3,23 μm

### nebulizer

### with TF/M adaptor, mouthpiece,

### corrugated tube and tubing

### features

- made of non-toxic materials
- 210 cm long, bend-resistant tubing with star-shaped cross-section • nebuliser with a 6ml capacity (graduated every 1ml), producing particles with an average size of MMAD =  $3.91 \,\mu m$  at a flow rate of 6 l/min.
- nebuliser, tubing, T-adaptor, mouthpiece, one-way valve and corrugated tube included in a kit
- universal T-adaptor with a diameter of 22M/15F 22F enables the kit to be connected to endotracheal, tracheostomy tube or breathing circuit and perform nebulisation on mechanically ventilated patients
- the universal (detachable) mouthpiece allows nebulisation to be given to patients who are breathing on their own
- silicone one-way valve (detachable) reduces medication waste during nebulisation sinale-use

### • packaging: 1 pc./foil

### indication

- · device is designed to produce an aerosol containing fragmented medication
- which can be delivered deep into the respiratory system with the patient's inhalation • enables nebulisation to be carried out in mechanically ventilated patients by connecting directly to the endotracheal tube, tracheostomy tube or inspiratory arm of the ventilator breathing system
- · allows you to perform nebulisation in patient "on one's own breath"

### reinforced endotracheal tube

### cuffed

### features

- made of flexible PVC
- reinforcing within the wall of the entire tube
- · equipped with lateral Murphy eye and radiopaque line over the entire tube length
- graduated every 1 cm, double depth marker to control the position of the tube • tube size marked in 4 places (on the connector, on the pilot balloon and in two
- places on the tube body) • indissiociable connector with an outer diameter of 15 mm
- single-use
- packaging: 1 pc./paper-foil

### indication

- for both oral and nasal intubation
- inserted into the trachea to prevent airway obstruction and respiratory failure
- for intubation of the patient in an unusual position, with a high risk of kinking the endotracheal tube

### intubation stylet

### features

- made of PVC-coated aluminium
- · special material for both stiffness and pliability
- intended for use during difficult intubation
- size and diameter markings
- soft distal tip
- single-use
- packaging: 1 pc./paper-foil

### indication

- allows you to give the endotracheal tube the right curvature • introduced to the endotracheal tube facilitates intubation in routine
- and difficult cases, when the laryngeal inlet is not visible

REF	size	diameter	length	tube size	intermediate packaging
PRI-06	6 Fr	2,0 mm	310 mm (±10)	from 2,0 to 4,0	20 pcs

PRI-14	14 Fr	4,7 mm	390 mm (±10)	from 7,0 to 10,0	20 pcs

### curved

### features

- made of medical grade low density polyethylene
- · curved and rounded tip enables safe intubation without
- damaging the soft tissues · optimum flexibility and rigidity facilitate correct insertion
- and safe removal of the introducer after intubation • imprint of the size, diameter and manufacturer's name
- on the device · bright yellow body for increased visibility of the introducer in the tracheal tube canal
- clear, easy to read graduation every 1 cm
- available in three sizes and lengths
- single-use
- PVC free
- packaging: 1 pc./paper-foil

### indication

52

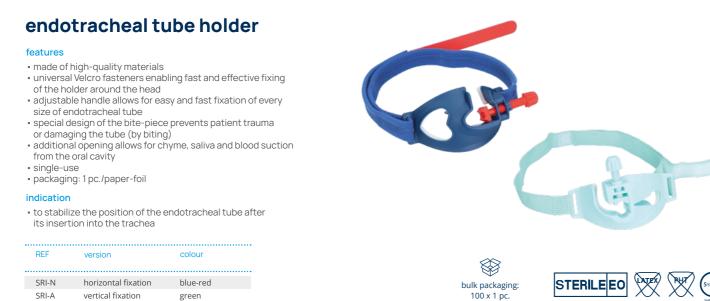

www.zarys.com

- for use during difficult intubation procedures
- as an aid to facilitate the insertion of the endotracheal tube during standard intubation

### oropharyngeal airway/guedel airway

- made of high quality PE (polyethylene), free of PVC
- distinctive anatomical curve of airway tube allows for the opening
- of the upper respiratory tract and the free flow of anaesthetic gases, air colour coded sizes
- numeric marking of the size on the airway
- single-use
- packaging: 1 pc./foil

### indication

- used during artificial ventilation procedures to ensure the airway patency as a tool for paramedic to assist in the management of a casualty's
- airway which increases the effectiveness of the rescue operation
- facilitates the stabilization of the endotracheal tube and protects it against biting

### laryngeal mask

PVC

### features

• made of medical PVC

- elastic mask body with description (size, cuff volume, suggested patient's weight)
- elliptic shape, flexible sealing cuff and universal, transparent connector: 15 mm colour-coded valve protection makes it easy to quickly recognize size
- single-use
- compatible with magnetic resonance (MR)
  no metal elements
- packaging: 1 pc./paper-foil

### indication

- device inserted through the mouth, up to the back of the throat, forms a seal at the top of the glottis in order to:
- direct protecting the patient's airway patency
- artificial ventilation also during cardiopulmonary resuscitation maintaining airway patency in: short-term surgical procedures,
- without the need of muscles relaxation, when endotracheal intubation is not necessary and under anesthesia for diagnostic procedures

### features

- due to the high quality of materials used, ventilation is conducted in an atraumatic and safe way for the patient
- anatomically shaped inflatable cuff, ensures perfect tightness of the mask with minimal pressure
- device, when applied to the face, tightly covers the patient's mouth and nose without compressing the eyes
- clear shell provides continuous visual observation of the patient
- · colour-coded retaining rings, easy for size recognition
- retaining ring can be removed when it is not needed • full size range allows to properly choose the size of the mask depending on the age of the patient
- · all sizes are equipped with inflatable check valve to adjust air amount for best cushion fitting auto patient's face
- single-use
- packaging: 1 pc./foil

### indication

- intended for the administration of a gas mixture coming through devices for artificial ventilation
- enables performing medical procedures including artificial ventilation, administration of anesthetic gas and carrying out emergency treatment of an unconscious patient

### NON DATEX STERLE

### anaesthetic mask with open seal

- due to the high quality of materials used, ventilation is conducted in an atraumatic an safe way for the patient
- anatomically shaped open seal made of TPE ensures perfect tightness of the mask with minimal pressure
- polypropylene, transparent mask dome allows continuous visual observation of the patient
- · device, when applied to the face, tightly covers the patient's mouth and nose without compressing the eyes
- size embossed on the body and colour-coded seal
- full size range allows to properly choose the size of the mask depending on the age of the patient
- sinale-use
- packaging: 1 pc./medical foil

### indication

- device intended for the administration of a gas mixture coming through devices for artificial ventilation
- enables performing medical procedures including artificial ventilation, administration of anesthetic gas and carrying out emergency treatment of an unconscious patient
- · device used in hospitals (operating theaters, intensive care units, emergency departments) as well as during pre-hospital care by rescue teams carrying out rescue operations in an unconscious patient

### catheter mount with double swivel elbow connector

### features

- smooth bore type made of medical PVC
- expandable type made of high quality PE, EVA
- universal patient connection: 22M/15F • ventilation device side connector: 15M or 22F
- expandable version characterized by shape memorizing
- and by the ability to control the position of the connector double swivel elbow connector
- · port for suctioning and bronchoscope secured with a stopper
- available in versions: smooth bore and expandable
- single-use • packaging: 1 pc./paper-foil

### indication

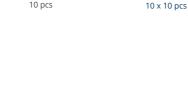

- used to connect the tracheostomy tube or endotracheal tube with the breathing circuit of the ventilation device provides greater mobility and rotation of the connection.
- increasing patient comfort and safety

# ZARYS

### dual-limb breathing circuit

### features

- made of high quality EVA material, without PVC
- 15F/22M and 22F universal connector fits compatible products
- and devices for mechanical ventilation or anesthesia machine
- · expandable arms with maximum length of 160 cm
- · adjustable length of circuit enabling adjustment of length of respiratory system and optimization of dead space
- equipped with latex-free breathing bag: 3I (for adults) or 1I (for children)
- additional expandable tube, length: 100 cm
- elbow with Luer-Lock port
- single-use
- packaging: 1 pc./foil

### indication

• for patient's mechanical ventilation • it enables transporting breathing mixture from equipment (ventilator, anesthesia machine) to respiratory protection device (e.g. tracheal tube, tracheostomy mask) and vice versa

# UROLOGICAL CATHETERS, **URINE BAGS**

### **Foley catheter**

### 2-way, silicone-coated latex

### features

- made of soft and flexible latex, that is resistant to bending and kinking • atraumatic, soft rounded, special tip facilitating insertion
- of the catheter to the bladder
- tip with two lateral eyes with smooth edges
  universal urine drainage port of the catheter fits into standard connectors in urine bags
- silicone-coated surface that allows atraumatic insertion of the catheter
  easy to fill and to empty, tear-resistant balloon of various capacities
- Plastic or rubber valve to ensure balloon tightness
  CH 6, CH 8, CH 10 size has a guide to facilitate catheterization
- sinale-use
- packaging: 1 pc./double packaging: internal- foil, external- paper-foil

### indication

• to drain urine from the bladder

### with plastic valve

### samples taking urine bag

### features

- latex-free bag with a capacity of 100 ml, size 19 cm x 7 cm
- made of delicate, durable PE foil
- easy-to-read scale, adequate for diuresis measurement, highly accurate every 10 ml
  adhesive part of the bag coated with anti-allergic, high-quality glue
  additional sealing made of anti-allergic foam that protects against the wall sticking of the bag, thanks to which free flow of urine is possible
- single-use
- packaging: 1 pc./foil

### indication

• for urine sample collection in infants and small children

### urine bag hanger

### features

- made of strong and durable plastic
- special clamp that prevents tube bending
- suitable for round and square bed rails
- two handles on each side for hanging urine bags of various sizes · manufacturer's name placed on the device
- single-use

### indication

• for hanging standard urine collection bags

# ZARYS

### urine bag

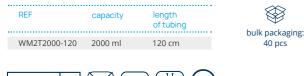

### with sample port 2W

### features

- latex-free 2000 ml bag made of medical grade PVC
- · white back wall making urine easy to notice
- effective non-return valve • tight T-valve, that can be easily operated with one hand and which can be folded and tucked in a hard sheath
- Pasteur type droplet chamber providing a "dry" air barrier
- two hydrophobic air filters (in a bag and chamber), which prevent sucking,
- balancing the pressure inside the system
- 120 cm long, large diameter tubing, ensuring a free and effective urinary outflow with a universal stepped connector
- self-tightening port for sample taking at the end of tubing • tubing equipped with a sliding clamp and a fastening pin to stabilize
- the tubing • at the place where the tubing connects to the chamber, an additional
- reinforcing element prevents bending and kinking the tubing • precise, easy-to-read scale, adequate for diuresis measurement, with high measurement accuracy, every 25 ml from 25 ml to 100 ml and every 100 ml
- from 100 ml to 2000 ml
- tag to describe the patient's details and date
- integrated universal hanger system matching the round and square bed rails • additional fixing with a string
- single-use
- packaging: 1 pc./paper-foil

### indication

• device is intended for 14-days urine collection in a closed system

# GENERAL SURGERY

### Yankauer surgical suction cannula

### standard CH21

### features

- completely transparent for full possibility of observing the sucked secretion • light and perfectly balanced handle ensures high comfort of work and reduces hand fatigue
- perfectly smooth inner surface prevents bLocking or retaining the sucked content, ensuring correct and optimal flow
- · cannula with double bend of curvature • four lateral eyes, which prevent the tip from sticking to the tissues and one
- central opening • universal stepped connector ensures tight connection with a wide range of suction connecting tubes
- sinale-use
- packaging: 1 pc./double packaging: internal- foil, external- paper-foil

### indication

• evacuating secretions and body fluids from the operating field in general surgery

### Yankauer surgical suction cannula

### bulb tip CH23

### features

- cannula with bulb tip with four lateral eyes, which prevent the tip from sticking to the tissues and one central opening
- completely transparent for full possibility of observing the sucked secretion
- · light and perfectly balanced handle ensures high comfort of work and reduces hand fatigue
- · perfectly smooth inner surface prevents bLocking or retaining the sucked content, ensuring correct and optimal flow
- · cannula with double bend of curvature
- universal stepped connector ensures tight connection with a wide range of suction connecting tubes
- single-use • packaging: 1 pc./double packaging: internal- foil, external- paper-foil

### indication

• evacuating secretions and body fluids from the operating field in general surgery

### surgical suction tube

### features

- made of soft and flexible PVC
- along the tube a special longitudinal reinforcement to prevent bending and sucking of the tube
- perfectly smooth inner surface of tube prevents the sucked content from settling on the walls, ensuring correct and optimal flow
- connector type funnel-funnel cut-to-fit with the possibility of cutting in the marked places of the connector and matching to any type of medical suction device (for the diameter of 8 mm to 18 mm)
- funnel connector equipped with a special bending system, enabling convenient manipulation of the tube
- tube connectors compatible with the standard suction cannulas, enabling their reliable, effective and tight connection
- single-use
- packaging: 1 pc./double packaging: internal- foil, external- paper-foil indication

- · device designed for connecting the suction cannula to medical suction device • Kapkon connector - designed to connect the catheter for aspiration of upper respiratory tract to medical suction device

# ZARYS

### **ID** wristband

### features

- durable wristband coating characterized by high humidity resistance and resistance to the activity of soaps, hand disinfectants and other liquids used in hospitals
- made of soft and delicate vinyl
- flexible, delicate, very light and easy to put on
- rounded edges prevent from injuring
- high tensile strength
- · colour marking depending on the purpose
  - · single-use fastening resistant to accidental break
  - hypoallergenic, latex-free, phthalate-free • available in a version with a description field directly on the band
  - and with an insert card
  - packaging: 100 pcs/box

### indication

• for identification of patients in hospital wards

### entrance mat

### features

- blue mat consisting of 30 layers thin sticky sheets
- each of the sticky sheets made of polyethylene resin
- · does not contain heavy metals
- excellent adhesive properties
- the first and last sheets secured with a non-adhesive foil
- low mat profile: app. 2 mm thick
- the bottom surface adheres very well to the floor over the entire surface, preventing adverse movement of the mat, allowing trouble-free passage of trolleys with equipment or beds, without the risk of curling up the mat or tearing • no need to clean the mat - as soon as the surface of the mat is contaminated,
- it should be torn off to uncover a new, clean sheet
- there is numbering of sheets on a white non-adhesive material in the mat corner facilitate quick identification and easy removal
- of subsequent sheets
- light, easy to spread

### indication

preventing spreading of contamination brought on shoe soles and wheelchairs to operating rooms

### features

- bag with a capacity of 1750 ml with two holes for hanging made of medical PVC
- scaled from 50 ml to 1750 ml
- linear scale every 100 ml, digital scale every 200 ml
- tube with a length of 150 cm with a sliding clamp, ended
- with an atraumatic opening and one lateral opening • tube end is secured with a tube cap
- upper part of the bag is reinforced with an additional flange
- stabilizing the inlet during filling with liquid • flange is equipped with a non-return valve
- sinale-use
- packaging: 1 pc./foil

### indication

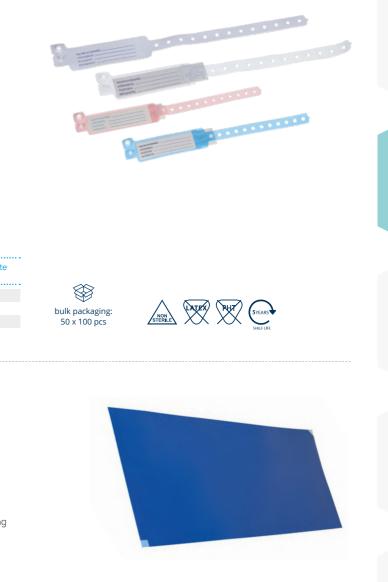

• bag that allows introduction of fluid into the large bowel through the anus to remove fecal material and stimulate peristaltic bowel movement

Ø REF NON STERRIE CATERY PHT OF STERRIE bulk packaging: ZLN 50 x 1 set

### vomit bag

### features

- bag is made of durable, transparent blue foil, enabling the observation of secretions • total bag capacity: 2000 ml
- exact measuring graduation (from 10 ml to 100 ml every 10 ml and from 100 to 2000 ml every 100 ml) placed on the bag allows accurate estimation of fluid volume
- direction of graduation reading for small volumes is marked with the tip
- wide bag inlet protected by a plastic collar
- circle-shaped collar ensures a firm grip, makes it easier to maneuver the bag, reducing the risk of content contamination
- collar equipped with a special incision to close the bag and hygienic disposal of the vomit - "twist and hook"
- · device name, manufacturer's name and pictorial instructions for use printed directly on the bag
- single-use
- · class I non-sterile medical device
- packaging: 20 pcs/foil bag

### indication

- recommended in uncomfortable situations, in cases of gastroesophageal reflux requiring immediate action
- used in hospitals, outpatient departments, ambulances, etc.

## tactical tourniquet CAT

### features

- made of soft and breathable material to prevent chafing and skin burns
- · additional element to secure the tourniquet and control blood flow
- locking system to prevent accidental opening of the tourniquet
- one-handed mechanism
- durable loop system with internal, free-moving strap that provides circumferential compression to the limb
- the unique double fastening system allows to avoid the use of screws and clips
- high quality of workmanship
- place to write down the time of establishment
- weight: 82g
- folded dimensions: 16 cm x 6 cm x 4cm
- unfolded dimensions: 96 cm x 4 cm
- · individually wrapped in foil packaging single-use

### indication

· tactical tourniquet used in case of limb injuries with massive arterial or venous bleeding that cannot be controlled by traditional techniques

REF	dimensions	intermediate packaging	
ST-001	96 cm x 4 cm	1 рс.	bulk packaging: 100 x 1 pcs

### automatic tourniquet

### features

- components: blue stretchy strap and white ABS plastic buckle
- length 480 mm +/- 10 mm, width 25 mm +/- 10 mm • wide, stretchable band put above the venipuncture site reduces
- the pressure intensity • protects against the congestion of the arm, minimizes unpleasant sensations, improves the quality of the blood sample
- reusable
- packaging: 1 pc./double packaging: internal- foil, external- box

### indication

• used to induce venous stasis and to make a vein selected for puncture more prominent

### for children

### features

- components: polyester stretch strap and ABS plastic items
- length 450 mm +/- 5 mm, width 25 mm +/- 1 mm
- wide stretch strap to minimise pressure build-up during compression
- significantly protects against arm congestion, improves the quality of the blood sample for
- examination • reduces unpleasant sensations during compression
- a simple one-handed mechanism for easy fastening and unfastening with gradual release of pressure
- reusable

### indication

• device used to induce venous stasis and to make a vein selected for puncture

### more prominent

### medical waste container

### features

- blow-moulded container made of high density polyethylene (HDPE), lid made of polypropylene (PP)
- lid equipped with a rosette insertion hole and two holes to separate blades from handles, needles from syringes, etc.
- dual-function lid for temporary or permanent closure of the container
- high resistance to mechanical deformation
- manufactured in red warning colour, other colours (yellow, blue) available on request • supplied with a BML-type label, injected during blowing, with an international warning sign and place for easily writing the waste data, even with a pen • resistant to UV radiation, formalin and ethyl alcohol
- it is approved by the National Institute of Public Health
- according to the requirements of the standards: ASTM F2132-01 (puncture resistance) and EN ISO 175 (resistance to immersion in liquid chemicals) sinale-use
- MOQ 5000 pcs

### indication

- intended for the collection of solid, hazardous medical waste such as needles, intravenous cannulas, syringes, disposable gloves, etc.
- the container enables the safe storage, transport and disposal of medical waste, ensuring safety in terms of hygiene and sanitary standards, as well as mechanical safety to prevent unwanted events such as punctures and cuts when medical staff dispose of sharp waste

### **KOMPRI lux S**

### without X-ray detectable thread

### **GAUZE LAP SPONGES**

### features

- 100% hydrophilic cotton
- bleached with the use of hydrogen peroxide
- with a sewed in X-ray detectable thread or chip, which enables fast and non-invasive identification
- of the lap sponge left in the operating field with a belt to fix the lap sponge beyond the operating field

### indication

Before used on open wounds, the device must be sterilized in accordance with a validated

sterilization method. It can be sterilized with steam or ethylene oxide

NONE TATER SHAFT STRATE

• as a surgical invasive dressing material for intraoperative absorption of large amounts of blood and body fluids from surgical wounds

Hippocrates' achievements in treating head wounds were so widespread and advanced that they are still used today. The Hippocrates cap also called "mitra is a headgear that allows you to hold the dressing and stop bleeding of the head wound. It is made of two bandage tapes. The main purpose of using the Hippocrates cap is to hold the dressing directly protecting the bleeding head wound, seal and warm the head, hold the compress applied to the skull area, compression, strengthening and immobilization after surgery and additional protection against the external environment. This solution is used in the absence of access to dressings such as elastic dressings and scarves.

### **RULES FOR BANDAGING**

How to make a

**HIPOCRATES CAP?** 

- 1. Prepare a two-head bandage about 5-6 cm wide by sewing together two bands or by twisting the free end to the middle.
- 2. Put the two-headed bandage on the back of the head and drive bandage to the forehead a circular move.
- 3. Cross the bandages on the forehead and drive one through the top of the head towards the occiput by a longitudinal move.
- 4. Drive the other bandage above the ear to the occiput also (half-round). 5. Scroll the longitudinal course through the circular course bandage.
- 6. Drive back the longitudinal course bandage across the top of the head to the forehead.
- 7. Drive the circular course bandage around the other ear to the forehead
- 8. Continue longitudinal and circular moves, the circular course bandage wraps around the scalp
- 9. Little by little, move the longitudinal course bandage towards the temples 10. After covering the whole area with a two-head bandage,
- fix the ends of bandage

114 www.zarys.com

high stretchability and strength of returning to pre-stretch state

• fixation of all dressings on the patient's body, replacing the traditional bandage • the use of tubular net bandage reduces the time of wound dressing and makes

### FIRST AID FOR DRESSING WOUNDS USING BANDAGES

### **ORTHOPEDIC PADDINGS**

### features

# **RULES FOR BANDAGING**

Select a bandage of proper type and size for the part of the body to be bandaged.

With your right hand, grasp the beginning of the band, and with your left hand hold the rolled part so called "head".

For proper stabilization of dressing, start bandaging with a circular wrap, each subsequent layer covers exactly the previous one in a durable and aesthetic way. Little by little unroll the band during bandaging. Finish the bandaging with a circular wrap, end of the dressing secure with a clip or tie it.

The bandage should adhere correctly to the patient's body and be rolled up with adequate power - too much pressure can lead to impaired circulation, too loose it will slide and fall.

Put the patient in a comfortable position supporting the bandaged lower or upper limb.

Remove the bandage by transferring it from one hand to other to minimize patient movement.

# paraffin gauze dressing

# paraffiNET

### features

- - secondary dressing
- and allows a painless change of dressing

# surgical sets

Surgical sets are medical devices personalized according to customer needs, dedicated to a selected medical procedure.

### **PROCEDURE SETS**

Operating theatre is a specific environment where time is the most valuable factor influencing the success of the operation. It is a place where every minute - or even a second - counts, because it can affect the patient's life. To meet the expectations of medicine, ZARYS introduces operating sets to its offer that meet the highest standards, helping to improve the preparation of the operating theatre before the procedure

### **ADVANTAGES** of using omegapack operating sets

 $\odot$ 

30% less time than selecting individual products and improving work at operating bLock

> REDUCING COST

**OUALITY** 

**STANDARDIZATION OF PROCEDURES** 

properly selected composition of the set according to individual needs for a specific medical procedure in line with the Customer's order

reduced risk of patient infection by minimizing the time of contact of medical staff with devices during the preparation of the theatre and the patient

correct and schematic conduct during the procedure, one package - one treatment

**EPIDEMIOLOGICAL SAFETY** 

**EFFECTIVENESS** 

I

increasing work productivity, so that you can perform more surgical procedures in one day, improvement of work of medical staff

Ş optimization of record keeping - one self-adhesive label with the identification of the used set, instead of each used product separately

### **REDUCTION OF ERRORS**

WIDE RANGE OF PRODUCTS 000

Å

SAVING

THE STOCKS

reduced number of supplies, saving space in the warehouse

a wide range of medical devices selected individually in accordance with the Customer's preferences

The sets are assembled on the basis of individual

Medical devices under the omegapack brand by ZARYS are operating sets containing complete equipment with all disposable products necessary to perform a given medical procedure to which the set is dedicated. The operating set contains carefully selected disposable components, such as:

• surgical drapes, pads

- accessories, e.g. fluid collection
- bags, tapes
- surgical gowns
- surgical gloves
- covers for equipment
- shoe covers, masks, caps

gauze balls

- gauze and non-wover
- bandages, dressings
- catheters, urine colle
- trays, bowls
- taps, three-way stopc
- manifolds, connectors

necessary for the surgical operation, which eliminates the possibility of errors during the selection of individual products

# **PROTECTIVE COVERALL SAFE+ TYPE 4b - 5b - 6b**

Personal protective equipments (PPE) are products that protect against one or more risks to the user's health or safety. These products must comply with Regulation (EU) 2016/425 of the European Parliament and of the Council. PPE is classified into three categories according to the degree of risk.

The coverall is a PPE category III in accordance with the Regulation (EU) 2016/425 of the European Parliament and of the Council

The category III covers products of complex construction, intended to protect health or life against risks that may cause death or irreversible damage to health.

Coverall is personal protective equipment of category III in conformity with Regulation (EU) 2016/425 of the European Parliament and of the Council

EN ISO 13688:2013 Protective clothing. General requirements

EN 14605:2005+A1:2009 Protective clothing against liquid chemicals. Performance requirements for clothing with liquid-tight (Type 3) or spray-tight (Type 4) connections, including items providing protection to parts of the body only (Types PB [3] and PB [4])

EN ISO 13982-1:2004+A1:2010 Protective clothing for use against solid particulates. Part 1: Performance requirements for chemical protective clothing providing protection to the full body against airborne solid particulates (type 5 clothing)

EN ISO 13982-1:2004 +A1:2010

EN 13034:2005+A1:2009 Protective clothing against liquid chemicals. Performance requirements for chemical protective clothing offering limited protective performance against liquid chemicals (Type 6 and Type PB [6] equipment)

EN 14126:2003 + AC:2004

EN 1073-2:2002 Protective clothing against radioactive contamination. Part 2: Requirements and test methods for non-ventilated protective clothing against particulate radioactive contamination

### Preventing infections in the operating field is a priority for all medicals. Thanks to our complex offer of singleuse protective solutions of ALPHAtex STANDARD, STANDARD+, COMFORT, the post-procedural complications and risk of infection in the operating field are minimized while increasing the protection barrier against the potentially pathogenic germs residing in the human skin layers. We offer:

- patient and equipment drapes
- sets of surgical drapes
- incise films
- surgical covers
- adhesive tapes
- accessories such as fluid collection pouches
- surgical gowns

Properly selected features of surgical drapes provide safety and comfort of use to medical staff and patients. A variety of multi-layer non-woven and laminates reinforced in critical areas in lines STANDARD+ and COMFORT allow to adjust our solutions to particular surgical procedures with maximal cost efficiency.

ALPHAtex products are characterized by parameters frequently exceeding the requirements of EN 13795 for 'Surgical drapes, gowns and clean air suits, used as medical devices for patients, clinical staff and equipment'.

Moreover, they provide a successful protection against the risk of infection in the operating field. Practical solutions and composition of our sets enable their quick and simple application while performing medical procedures.

# C ALPHAtex surgical sets, drapes, gowns

surgical drapes I surgical covers and accessories I surgical sets I surgical gowns

## **Prevention of surgical** site infection

The wide range of ALPHAtex products is a result of over 30 years of ZARYS International Group existence on medical market. Sharing our experience and knowledge we are convinced that using ALPHAtex products will provide comfort, safety and economic effectiveness during daily work in the operating room.

#### Surgical site infection (SSI) -

is defined as infection occurring up to 30 days after surgery, when there is a possibility of microorganisms penetration into the open surgical wound. Microorganisms could have various sources EXOGENOUS (carried by an external factor as medical staff or medical devices) or ENDOGENOUS (patient's bacterial flora from the closest area surrounding the surgical postoperative wound). The most important routes of infections are airway or contact path. Various type of barriers are used to minimalize the surgical site infections: surgical drapes, surgical gowns and medical equipment covers.

**Surgical drapes** (the names are based on the EN 13795 standard)

Surgical drapes are used to ensure clean microbiological surgical wound surrounding, minimalize the microorganisms migration from patient skin to surgical wound and to supervise the spreading of body fluids from the wound area. Surgical drapes meet the requirements of medical device in accordance with the Directive 93/42/EEC.

#### Surgical gowns (the names are based on the EN 13795 standard)

Surgical gowns are used to prevent direct microorganisms transmission from medical staff to patient. Moreover, surgical gowns prevent spreading of exfoliated epidermis in the air of the operating room.

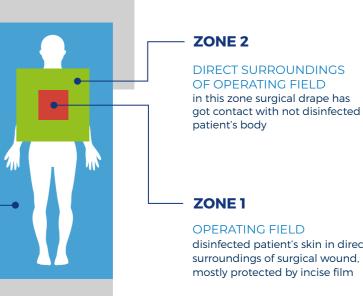

ZONES OF SURGICAL DRAPES ON PATIENT

on the operating room

**ZONE 4** NOT HAVING ANY CONTACT WITH PATIENT'S BODY performs the function of anaesthetic cover and operating table cover

#### **ZONE 3**

PARTIAL CONTACT WITH NOT OPERATED PARTS OF PATIENT'S BODY occasionally exposed to body fluids

disinfected patient's skin in direct surroundings of surgical wound, mostly protected by incise film

#### Standard EN 13795-1:2019 -

Essential requirements for surgical drapes and surgical gowns results from directive 93/42/EEC and have been included in EN 13795 standard "Surgical drapes, gowns and clean air suits, used as medical devices for patients, clinical staff and equipment". The purpose of EN 13795 standard is to maintain stable level of surgical drapes and surgical gowns safety for the whole using period as well as minimalization of direct microorganisms transmission from medical staff to patient during surgical procedures.

It is extremely important for us to offer our clients products that ensure high standards of working conditions and comfort of use.

In order to achieve this goal, we have created a line of high quality products made of different types of non-woven

- polypropylene non-woven

- viscose non-woven
- Spunlace Mesh non-woven

A combination of several factors such as optimal design, perfect fit, breathability and structure makes BETAtex products comfortable and certainly meet our clients' individual comfortand safety for the Medical Personnel and the Patients.
