easyCARE nitrile **flex**

Durability and freedom of movement

When designing, our priority was to combine the strength of nitrile with maximum freedom of movement. The result is a product that reduces the feeling of hand fatigue.

Precision and safety

easyCARE nitrile flex ensures excellent tactile sensitivity thanks to high flexibility and texture at the fingertips. This translates into greater precision and accuracy during diagnostic tests.

The gloves are equipped with a rolled cuff that ensures **stability during use** and prevents slipping during work.

The product **effectively protects** against microorganisms and potentially infectious substances.

High-quality material.

The material used in easyCARE nitrile flex gloves does not contain latex or phthalates and is **safe for the skin**.

The inner lining makes the gloves pleasant to the touch and **comfortable even during prolonged use**. Reduces friction, making them easy to put on and take off, even with wet hands.

medical device

Category III Personal Protective Equipment

no allergic reactions

excellent tactile sensitivity

stable adhesion to the hand

reduced feeling of fatigue

high elasticity
